Cominfo Inc. is a Virginia-based disadvantaged, woman-owned small business and General Services Administration (GSA) Information Technology (IT) Schedule 70 holder. We offer a unique blend of military experience and corporate knowledge in the areas of modernization, transformation, automation, and custom application development.

Since our inception in 2000, Cominfo has delivered projects ranging from \$25,000 to \$16 million for U.S. federal agencies and U.S. Armed Forces. Cominfo has invested heavily in recognized quality processes and standards, such as PMBOK and ITIL.

Cominfo has provided Information Technology Services as the prime contractor for the U.S. Department of State, U.S. Department of Defense, U.S. Small Business Administration, U.S. Federal Election Commission, 3M Company, SAIC, and Washington Gas, just to name a few.

Our areas of expertise include Database Management, Business Intelligence, Infrastructure design and maintenance, and cyber security. Our staff consists of a multi-faceted, highly skilled, and educated workforce with a proven record of accomplishments and commitment to excellence required to meet the challenges faced in today's economy and technological environment.

CGI Federal can plan, design and implement business and technology solutions that fulfill our clients' strategic priorities. CGI Federal is a full-service system integrator, providing systems architecture and integration services as well as custom solution design and implementation; and provides a full range of consulting services, such as program management, business process reengineering, training, change management, communications management, quality assurance (QA), independent verification and validation (IV&V), information assurance (IA), and security.

CGI Federal provides services to help our clients develop and improve their enterprise architectures. We assess the applicability and suitability of commercial applications, participate in design reviews, and develop migration plans to transition to new systems and technology, and retire outdated ones.

CGI Federal provides day-to-day maintenance and modernization for our clients' business applications, helping reduce costs and ensure faster delivery of new capabilities. Services include requirements definition, configuration management, configuration audits, application design, development, enhancements, maintenance, testing, and support. Clients often engage us to manage their applications in CGI data centers. The rigor of our processes is reflected in our CMM Level 3 certification.

Task Orders

Cominfo was awarded a SeaPort-e prime contract on June 30, 2016. We have not yet been awarded any task orders.

Task Order	Description	Award Date	End Date	Functional Area	Zone	Customer

Functional Areas:

<p>3.6 - Software Engineering, Development, Programming, and Network Support</p> <p>This functional area consists of applying the engineering and scientific disciplines to perform technical analysis of, technically support development of or selection of hardware and computer software, or modification to existing hardware and software for systems, test facilities, or training facilities. This also consists of software engineering efforts and programming support required to technically support software implementation in systems, sub-systems, and components utilizing computers, electronics, and software. Planning, designing, coding, testing, integrating, supporting, and delivering algorithms, software (source code and executables), computer programs are the inherent activities of this functional area. Commercial Off-The-Shelf (COTS) solutions and product modifications (e.g., software tools, licensing, and associated hardware) which are incidental to the overall support service efforts are considered within the scope of this functional area. Generally, the software development processes used for software development under this contract shall be, as a minimum, assessed at Software Engineering Institute (SEI) Capability Maturity Model (CMM) Level</p>
<p>3.10 - Configuration Management (CM) Support</p> <p>This functional area consists of applying engineering and analytical disciplines to identify, document, and verify the functional, performance, and physical characteristics of systems, to control changes and non-conformance, and to track actual configurations of systems and platforms.</p>
<p>3.11 - Quality Assurance (QA) Support</p> <p>This functional area consists of applying engineering and analytical disciplines to ensure that the processes and products used in the design, development, fabrication, manufacture and installation result in quality products.</p>
<p>3.12 - Information System (IS) Development, Information Assurance (IA), and Information Technology (IT) Support</p> <p>This functional area consists of providing information system software analysis, requirements definition, design, development, test, modification, installation, implementation, quality assurance, training, and documentation to meet the evolving data storage and reporting needs of programs and management. Analyze existing IT and IS databases, web sites, and IT applications and recommend new or improved interfaces and improved management tools that meet new management requirements, or improve management effectiveness and efficiency. Perform maintenance and technical support for Local Area Networks (LAN) and Wide Area Networks (WAN) that are outside the cognizance of the Navy Marine Corps Intranet (NMCI). Modify, implement and maintain web based information systems and links. Develop web-site structure, prepare documentation for population, implement and maintain web sites. Provide systems engineering and technical support for establishment, test, upgrade, and operational support of systems, networks, workstations and support equipment hardware and software that are outside the cognizance of NMCI. Conduct IA analyses, develop, recommend, and implement, monitor, update, and maintain, IA practices, procedures, equipments, algorithms, and hardware that are outside the cognizance of NMCI.</p>
